

## BlueView Unveils P900E at VideoRay Integrated Partners (VIPS) Conference

***BlueView Technologies' new P900E received huge attention at VIPS conferences in Key Largo, FL and Lisbon, Portugal***

***November 5-9, 2006*** - The VIPS Micro-ROV conference is an annual 3 day program of presentations from industry experts, hands-on training, technology insights, and camaraderie (and good food) with industry peers. Held in both Key Largo, FL and Lisbon, Portugal, the conference features hands-on dockside and vessel launched demonstrations where anything goes and attendees are encouraged to try out the featured equipment. BlueView attended these events to demonstrate the effectiveness of both the P450 and the newly released P900 integrated on VideoRay ROVs.

There was tremendous excitement at the Key Largo conference about the U. S. debut of the P900E-20, prior to its official commercial release. Attendees from many industry sectors had a chance to “fly” the new sonar on the VideoRay ROV and see first hand what all the huh-bub was about. This year attendees included members of Navy Dive Teams, Law Enforcement, Research institutions and many US and international Dealer/Distributors of Marine equipment. As in the past, the VIPS conference was a good opportunity to meet with current and potential customers and dealers to better understand their needs, and to generate many solid leads that will result in new sales for 2007.

From October 22nd through 26th, 2006 BlueView also attended the VIPS conference in Lisbon, Portugal to train VideoRay's European Dealers on BlueView's Equipment. BlueView had both its 450 and 900kHz system there, allowing people to try both. There was always a crowd around the BlueView table as attendees were able to see and test drive both the P450 and the P900 sonar on a VideoRay ROV. Attendees agreed that both sonar add tremendous new capabilities to the VideoRay ROV.

**About BlueView Technologies**

Located in Seattle Washington, BlueView Technologies manufactures both custom and off-the-shelf miniature multibeam sonar solutions. BlueView provides mission-critical real-time underwater vision for Navy, Law Enforcement, Oil & Gas, and other marine applications.
